Multiple Virus Protection (MVP)

Protect your Employees, Family & Customers

Our treatment process eliminates Coronavirus and protects for up to 90 days.

Normal cleaning does not reduce its effectiveness. SurfaceGuard90 is safe for any surface including food areas.

- The SurfaceGuard 90 patented formula bonds to all surfaces creating molecular spikes, eliminating 99.99% of pathogens including virus, bacteria, germs, mold and algae.
- SurfaceGuard 90 prevents cross contamination on all treated surfaces.
- EPA Registered & USDA Approved.

Multiple Virus Protection (MVP)

Pathogens

Virus and other pathogens survive on untreated surfaces. Therefore any area left untreated can cause infection through contact.

Our treatment Process

All touchpoints are disinfected using hospital grade disinfectant followed by an application of SurfaceGuard 90 a biostatic antimicrobial coating which protects against reinfection for up to 90 days.

Affordable protection that lasts

- Equally effective as a treatment for existing Coronavirus or as a long-term invisible shield against future contamination.
- Will not wash off with chemicals and cleaners.
- Provides extremely durable, long lasting protection for 90 days that won't lose its virulence over time.
- Compatible with all surfaces including stainless steel, rubber, plastic, natural & synthetic fibers, stone, tile, wood, concrete & carpeting.
- Extremely effective against mold, fungi, algae and harmful bacteria including MRSA, STAPH, STREP, TB, HINI and E-COLI.

We are not a cleaning company

- Bleach alone is not enough. Once the surface dries the area is at risk for recontamination.
- Our protective coating continuously eliminates all virus and other harmful other pathogens for up to 90 days.
- Cleaning service may make the environment look clean and disinfected but it's not germ free.
